

Concept:

The ability for a 'trusted party' to 'borrow' specialised VR camera gear from a central location and utilise this to capture an experience to share with others – as if they were a companion on the journey.

1. **Borrow** VR Gear from a post office
2. **Capture** a unique experience as if journeying with someone else
3. **Share** the content with an online community

The Details:

Compania.VR is a shared community that allows users to :

- Create a profile, and verify themselves online. This will require the ability to verify sufficient detail about the person in order to provide assurances that they are:
 - Who they say they are
 - Sufficiently trusted to load content to the site
 - Sufficiently trusted to borrow equipment from the shared pool.
- 'Borrow' VR equipment from central points around Australia (possibly the world)

- Use this specialised equipment to capture an 'experience' (such as travel through a specific region, attend a festival or event, ride a rollercoaster, etc.)

- Load this experience into an online sharing site (with a companion app) along with a blurb and other details, that allows other users to:
 - o View these experiences via YouTube360, GearVR, Cardboard devices, etc
 - o Vote and promote captured experiences
 - o Create virtual 'trips' via geo - located experiences plotted on a map
